**ABSTRACT OF THE DISCLOSURE**

A system and method for displaying analysis data of a partitioned OS is provided. Event information is read from an event log, and a partition ID, task name and task state corresponding to the event information is determined. On a graphical display, a visual representation of the partition ID, task name and task state at a specific, corresponding time on a time graph is displayed. In this regard, the visual representation positioned to correlate with the partition ID.
